

Yogoda Satsanga Mahavidyalaya

Jagannathpur, Dhurwa, Ranchi-834004 Email address: ysmranchi4@gamil.com (NACC Accredited, Grade: B++, CGPA: 2.89)

COURSE OUTCOME OF B.SC(IT) DEPARTMENT

Semester	Course Code	Course Name	Course Outcome
I	C1	Programming Fundamental using C/C++	 1.Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects. 2. Understand how to write correct program 3.Describe the concept of function overloading, operator overloading, virtual functions and polymorphism.
	C2	Computer System Architecture	 1.Explain design of digital circuit and functioning of CPU 2.Explain the organization of basic computer , its design and the design of control unit 3. Describe the operations and language f the register transfer, micro operations and input- output organization.
II	C3	Data Structures with C	 1.Understand basic data structures such as arrays, linked lists, stacks and queues. 2.Describe the hash function and concepts of collision and its resolution methods 3.Solve problem involving graphs, trees and heaps 4. Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data
	C4	Discrete Structures	 Perform operations on various discrete structures such as sets, functions, relations, and sequences. Ability to solve problems using Counting techniques, Permutation and Combination, Recursion and generating functions. Apply algorithms and use of graphs and trees as tools to visualize and simplify Problems.
111	C5	Programming in JAVA	 Write Java application programs using OOP principles and proper program structuring. Develop Java program using packages, inheritance and interface.

			 Create Multithreaded programs. Write Java programs to implement error handling techniques using exception handling and develop programs using class and inputs from keyboard. Develop graphical User Interface using AWT. Demonstrate event handling mechanism. Understand the basics of operating
	C6	Operating Systems	 systems like kernel, shell, types and views of operating systems 2. Describe the various CPU scheduling algorithms and remove deadlocks. 3. Explain various memory management techniques and concept of thrashing 4. Use disk management and disk scheduling algorithms for better utilization of external memory. 5. Recognize file system interface, protection and security mechanisms.
	C7	Computer Networks	 Understand computer network basics, network architecture, TCP/IP and OSI reference models. Identify and understand various techniques and modes of transmission Describe data link protocols, multi- channel access protocols and IEEE 802 standards for LAN Describe routing and congestion in network layer with routing algorithms and classify IPV4 addressing scheme
	SEC 1	Elementary Computer Application Software	 1.Can perform typing and formatting 2.Habituated in mail merge application 3.Apply excel in different area like, statistics, finance and present using excel chart 4.Preapration of presentation
IV	C8	Theory of Computation	 Understand the basic concepts of formal languages, automata and grammar types, as well as the use of formal languages and reduction in normal forms Demonstrate the relation between regular expressions, automata, languages and grammar with formal mathematical methods Design push down automata, cellular automata and turing machines performing tasks of moderate complexity Analyze the syntax and formal properties, parsing of various grammars such as LL(k) and LR(k) Describe the rewriting systems and derivation languages

C9 Visual Basis .NET 1. Understand an overview of computers and computer programming. C9 Visual Basis .NET 2. Understand Visual Basic applications. 1. Describe DBMS architecture, physical and logical database designs, database modeling, relational, hierarchical and network models. 2.1dentify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. C10 Database Management Systems 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4. Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms and database protection mechanisms and database protection mechanisms. SEC 2 MATLAB Programming 1. Understand program syntax like if-else, while et 2. Understand functions 3. Utilize MATLAB program in Numerical Method C11 Internet Technologies 1. Discuss the insights of internet programing and implement complete application over the web. C11 Internet Technologies 3. Utilize the concepts of JavaScript and
C10 2.Understand Visual Basic applications. 1. Describe DBMS architecture, physical and logical database designs, database modeling, relational, hierarchical and network models. 2.Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. C10 Database Management Systems C10 Database Management Systems Imaguage (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. SEC 2 MATLAB Programming SEC 2 MATLAB Programming 1.Understand program syntax like if-else, while etc 2.Understand program in Numerical Method Method 1. Discuss the insights of internet program in Numerical Method C11 Internet Technologies 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systems1. Describe DBMS architecture, physical and logical database designs, database modeling, relational, hierarchical and network models. 2.1dentify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms.SEC 2MATLAB Programming1. Understand program syntax like if-else, while etc 2. Understand program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemsand logical database designs, database modeling, relational, hierarchical and network models. 2.Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemsmodeling, relational, hierarchical and network models. 2.Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemsnetwork models. 2.Identify basic database storage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemsstorage structures and access techniques such as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemssuch as file organizations, indexing methods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemsmethods including B-tree, and hashing. 3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C10Database Management Systems3. Learn and apply Structured query language (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming static pages and separate design from content using Cascading Style sheet.
C10Database Management Systemslanguage (SQL) for database definition and database manipulation. 4.Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies C11 Internet Technologies
A.Demonstrate an understanding of Normalization theory and apply such Knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms mechanisms. 1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize SEC 2 MATLAB Programming 2.Understanding functions 3.Utilize MATLAB program in Numerical Method 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies Normalization theory and apply such knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms. 1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical Method 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies Knowledge to the normalization of a database. 5. Understand various transaction processing, concurrency control mechanisms and database protection mechanisms. SEC 2 MATLAB Programming 1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical Method 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11Internet Technologiesdatabase5.Understandvarious transaction processing, concurrency control mechanisms and database protection mechanisms.C11Internet Technologies1.Internet Technologies1.Internet Technologies1.Internet TechnologiesC11Internet Technologies2.Internet Technologies2.Internet Technologies1.Internet Technologies
SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodC11Internet Technologies1. Discuss the insights of internet programming static pages and separate design from content using Cascading Style sheet.

MATLAB Programmingmechanisms.SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodMethod1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
SEC 2MATLAB Programming1.Understand program syntax like if-else, while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical MethodMATLAB Programming1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
SEC 2 MATLAB Programming while etc 2.Understanding functions 3.Utilize MATLAB program in Numerical Method Image: Constraint of the second
SEC 2MATLAB Programming2.Understanding functions 3.Utilize MATLAB program in Numerical MethodImage: Constraint of the second
C11 Internet Technologies 3.Utilize MATLAB program in Numerical Method 3.Utilize MATLAB program in Numerical Method 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
Method 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies 1. Discuss the insights of internet programming and implement complete application over the web. 2. Demonstrate the important HTML tags for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies programming and implement complete application over the web. C11 Internet Technologies and separate design from content using Cascading Style sheet.
C11 Internet Technologies and separate design from content using Cascading Style sheet.
C11 Internet Technologies 2. Demonstrate the important HTML tags designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies for designing static pages and separate design from content using Cascading Style sheet.
C11 Internet Technologies design from content using Cascading Style sheet.
sheet.
Java
4.Utilize the concept of JSP, Servlets and
JavaBean
1.Plan a software engineering process life
cycle, including the specification, design,
v implementation, and testing of software
systems that meet specification,
performance, maintenance and quality
requirements
2. Able to elicit, analyse and specify
software requirements through a productive
C12 Software Engineering working relationship with various
stakeholders of the project
3. Analyze and translate a specification into
a design, and then realize that design
practically, using an appropriate software
engineering methodology.
4. Know how to develop the code from the

	1	Τ	
			management and practice 5. Able to use modern engineering tools necessary for software project management, time management and software reuse.
	DSE 1	Information Security & Cyber Law	 Define the security controls sufficient to provide a required level of confidentiality, integrity, and availability in an organization's computer systems and networks. Understand the different cryptographic principle. Design, develop, test and evaluate secure software. Develop policies and procedures to manage enterprise security risks.
	DSE 2	Programming in Python	 1.Explain basic principles of Python programming language 2. Implement object oriented concepts 3. Implement database and GUI applications.
VI	C13	Artificial Intelligence and Android Programming	 I.Understand the theoretical base of the expert system and its development process. Differentiate between different knowledge representation techniques and describe methods of knowledge acquisition and extraction. Describe various learning and planning techniques for different types of expert systems such as neural, fuzzy and real expert system. Develop expert systems using various available tools
	C14	Computer Graphics with Flash	 Understand the basics of computer graphics, different graphics systems and applications of computer graphics. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis. Use of geometric transformations on graphics objects and their application in composite form. Extract scene with different clipping methods and its transformation to graphics display device. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen
	DSE 3	Cloud computing	1.Reduces implementation and maintenance costs2. How to provide Flexible and scalable infrastructures

		 Increased availability of high- performance applications to small/ medium-sized businesses case studies will help us to understand more of practice of cloud computing in the market.
DSE 4	Project Work/ Dissertation	Understand real life application Exposure of working in the industry
